

THE TOP TEN BENEFITS OF PODIATRY HOUSE-CALLS

1. NO UNNECESSARY TRANSPORTATION. You save precious life time and money. No need to own a car, insurance, maintenance, registration, or fill-up a gas tank. No worries about a valid driving license and current eye glasses. Stop wasting your life with ever increasing traffic, misplaced street signs, unnoticeable speed limits, malfunctioning red lights, revised traffic rules, and police monitored cameras. Abandon the absurdities of GPS road map technology and the nuisances of lost drivers. Forget about unpredictable down pouring rainfalls, floods, hurricanes and road constructions. No more road rage, full parking lots, unpaved potholes, wheelchair obstacles, impassable steps, and slippery floors.

2. NO UNNECESSARY HEALTH RISK EXPOSURE. Why share the same room air with potentially dozens of people, even if they are just plainly unhygienic and not contagiously sick? Why touch the same furniture used by individuals you would not even do a handshake with? Have you not already volunteered enough long hours throughout your life in the company of unknown, disturbed and sick people?

3. NO UNNECESSARY OFFICE BUREAUCRACY. Why become subjected to a multitude of people from all paths of life, when you only need the proper attention of a single qualified doctor? Why tolerate unnecessary sign-in forms, registration forms, disclaimer initialized forms, and other constantly multiplying paper-work and computer-work? And each time possibly jeopardizing the already tenuous safety of your identity?

4. NO UNNECESSARY ATTENTION. You did not go to a doctor's office to mainly spend time with a 6-month program graduate, or even a 2-year degree holder. You are paying for the time of a minimum 10+ years educated and licensed physician, and that individual's possibly another 10+ years of practical experience and specialized skills. Get what you pay for, no less no more, why compromise?

5. NO UNNECESSARY TESTS. You are not a volunteer in a medical experiment in search of solving an enigma. You need a specific straight-forward service which you already know of. Why increase your insurance bills? Why pay a medical clinic and its staff for unnecessary evaluations, referrals and tests for blood work, urine samples, stool samples, and vaccinations when all you need is a professional to help you with your toenails?

6. NO UNNECESSARY SOLICITATIONS. Why go to a medical clinic and be exposed to apparently unrelated products and services? Perhaps even offered as treatment medical marijuana products, anti-depressant pills, sleep pills, pain pills, and other psychoactive substances? When all you, your child, and your aging father or mother ask for is a straight forward professional care of toenails, corns and calluses?

7. NO UNNECESSARY VISITS. You are in full control of the house-call visit day and time. The scheduling is as simple as a single phone call straight to your own doctor. No need to remember passwords, visit websites, or use internet at all.

8. NO UNNECESSARY DEPENDENCY. Privacy, discretion and dignity are not only words. Your family and friends already have enough obligations and daily battles to fight on their own. You would not need to repeatedly seek their help and attention. Not when the challenge of a 3 hours or more trip to a medical clinic could be reduced to a few minutes of professional healthcare in the comfort of your home.

9. NO "CLAWS". Left untrimmed, the toenails will start their natural transformation from a "long" toenail at 3 months, to a thick "rams' horn" toenail at 6 months, to a fully functional "claw" at 1 year. Some of the toenail changes at that time would become irreversible, even with modern science.

10. NO "CORNS AND CALLUSES". Left unshaved, the "soft corn" may transform into a "hard corn" at 3 months, to more extensive "callus" at 6 months. In bed-bound patients, some of the "corns and calluses" if neglected, may develop into ulcers with possible limb threatening infections, and even gangrene.
