INTEGRATED TEAM APPROACH

ReSkin Medical providers are experienced and passionate about what they do. Our providers use the latest technology and procedures available. We use amnion derived products for skin grafting, the latest infrared tools for ensuring adequate blood supply, molecular testing for infection as frequently as necessary.

In order to make the most from ReSkin's cutting edge wound care procedures and technology, ReSkin providers remain in constant communication with the entire healthcare team. Primary care providers, home health companies, vascular specialists and Hospital Based Wound clinics are invaluable partners in addressing and healing these chronic and complex problems.

Latest technology used for assessment of wounds and monitoring of the healing process.

CLEAR & COMPREHENSIVE CARE PLAN

A comprehensive care plan includes an approach which provides the greatest probability of success by addressing the underlying causes as well as the chronic condition and complex healing process. ReSkin providers are constantly probing for opportunities and weaknesses within the healing process to improve the rate and quality of healing.

ETIOLOGY

Understand and treat the underlying disease process.

BARRIERS TO HEALING

From possible infection to nutrition to adequate blood supply, all must be continuously addressed.

LIKELIHOOD FOR CLOSURE

Once we understand the cause and remove barriers to healing, ReSkin methodologies provide the greatest opportunity and likelihood of complete healing through the use of state of the art techniques, procedures and materials.

EARLY ASSESSMENT

ReSkin Medical works with dedicated providers who possess a passion for healing patients. Whether in a clinic, a facility, or even in the home our providers will perform an expert assessment as early as possible in order to plan and intervene appropriately. This early assessment is critical to creating a comprehensive plan which engages the entire health care team in a single well integrated process.

79 year old female, pressure ulcer on left ankle.
